

## Node.JS / Angular Task List

- Create an Angular site with version 6+
- Create a product add layout on Angular to display and add items to the cart

Something like :

- Create an API to get items. Details required - ( name,description,price,image )
- The website should get items from nodejs API
- Create Admin API to create the items. Admin can hit the API via postman to add items with name,description,price,image
- Cart page - should display items ( no need for payments )
- Create a git repo for node and angular
- Database - any SQL Database
- Make any assumptions if any

**\*\* Submission - provide git repos public url. Provide any details in Readme if required.**
